BRIGHT COFFEE SHOP

Sales Data Analysis Report

Analysis Period: January – June | Three Store Locations

Prepared by: Malotse Emanuel Mathipa, Data Analyst

Submitted to: Chief Executive Officer, Bright Coffee Shop

Astoria

Hell's Kitchen

Lower Manhattan

What This Report Covers

EXECUTIVE SUMMARY

Six-Month Performance Overview — All Three Stores Combined

January to June | Astoria · Hell's Kitchen · Lower Manhattan

R698,812

Total Revenue Generated

Across all 3 stores, Jan–Jun

R232,270

Average Revenue per Store

Stores perform near equally

149,116

Total Transactions

Jan 17,314 → Jun 35,352 (+104%)

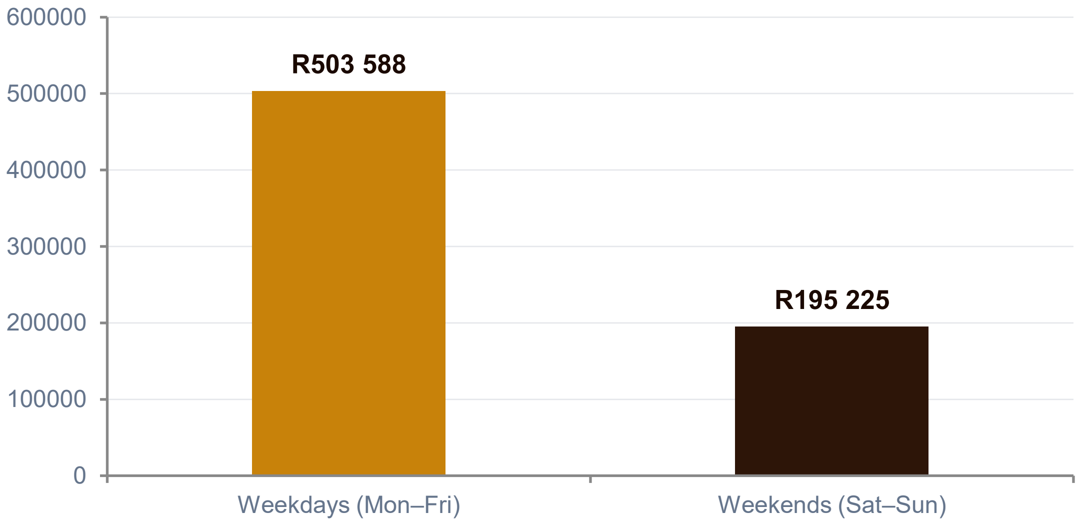
R88,673

Highest Single-Hour Revenue

10:00–11:00 peak trading hour

Weekday vs Weekend Sales Revenue

Total accumulated revenue for all weekdays (Mon–Fri) compared to all weekend days (Sat–Sun), January to June



72%

of total revenue generated on weekdays

28%

only from weekend trading — a major gap

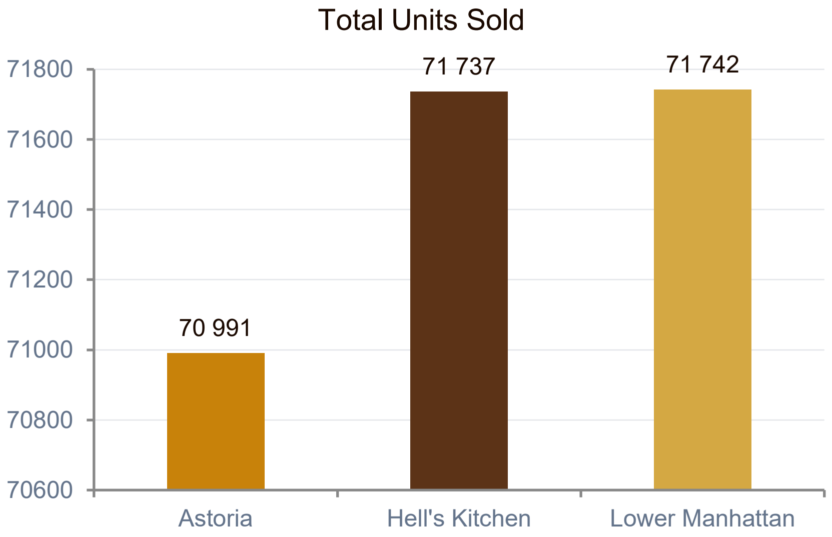
−61%

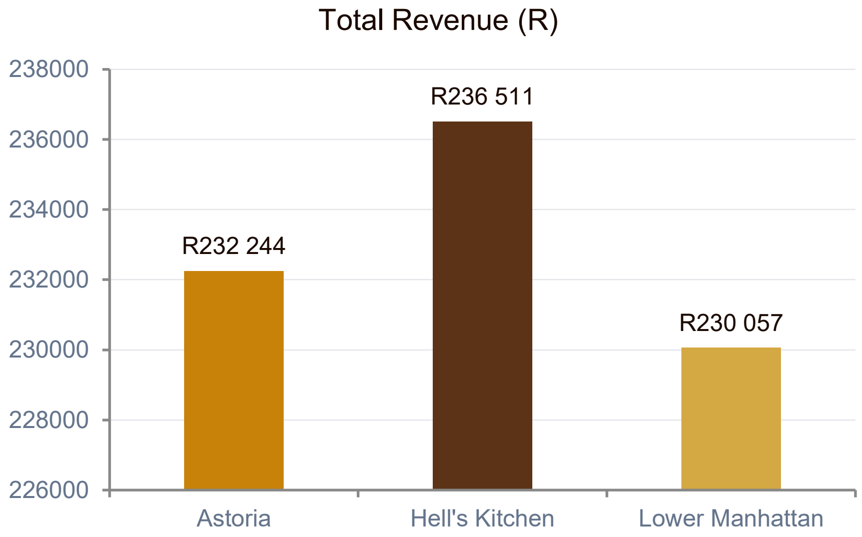
weekend revenue vs weekday total

📌 **Observation:** Weekend sales total only R195,224 compared to R503,587 on weekdays — a 61% shortfall. With limited weekend footfall, targeted promotions on Saturdays and Sundays represent the single largest untapped revenue opportunity for the business.

Sales Performance by Store Location

Total transaction volume (units) and total revenue (R) per store — January to June

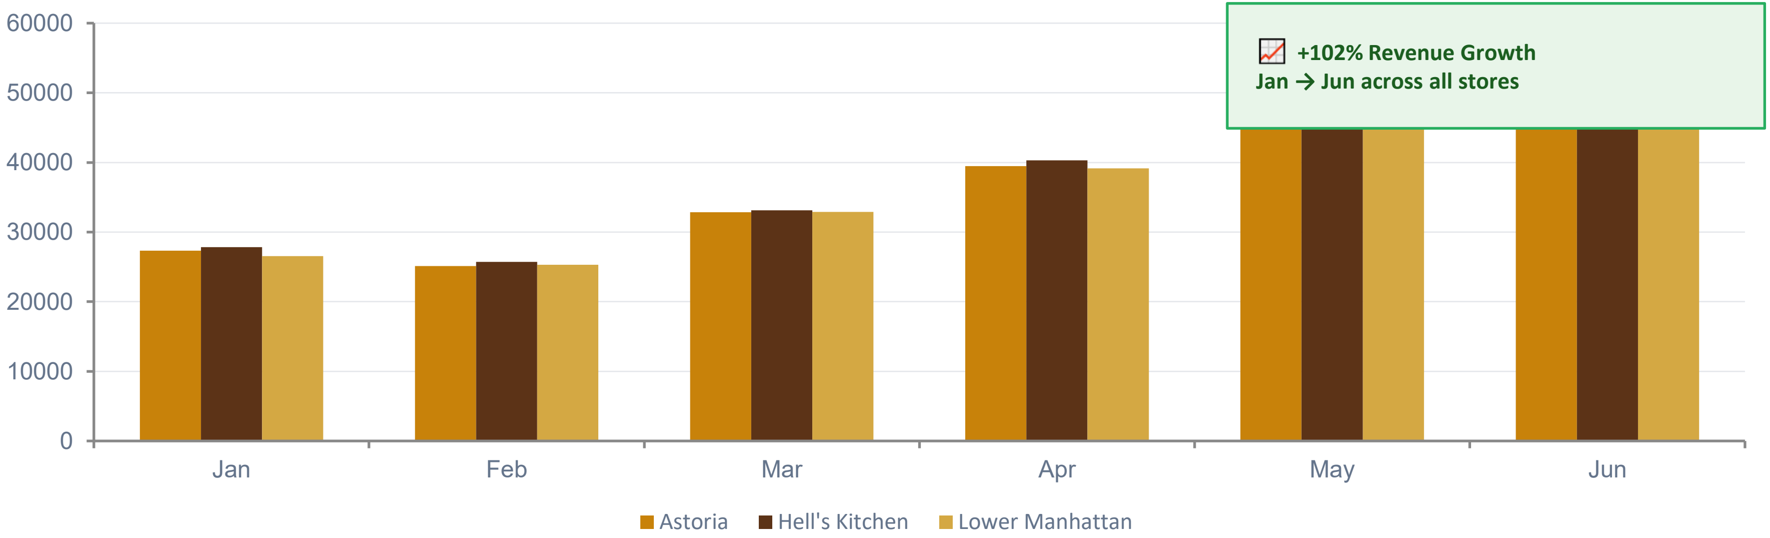




📌 **Observation:** All three stores perform remarkably similarly in both volume and revenue — Astoria (R232,243), Hell's Kitchen (R236,511) and Lower Manhattan (R230,057). No single store is severely underperforming; the challenge is a business-wide pattern, not a location-specific one. Systemic issues such as weekend footfall and product mix should be addressed across all three.

Six-Month Revenue Trend by Store

Monthly revenue per store — January through June — showing clear upward growth trajectory

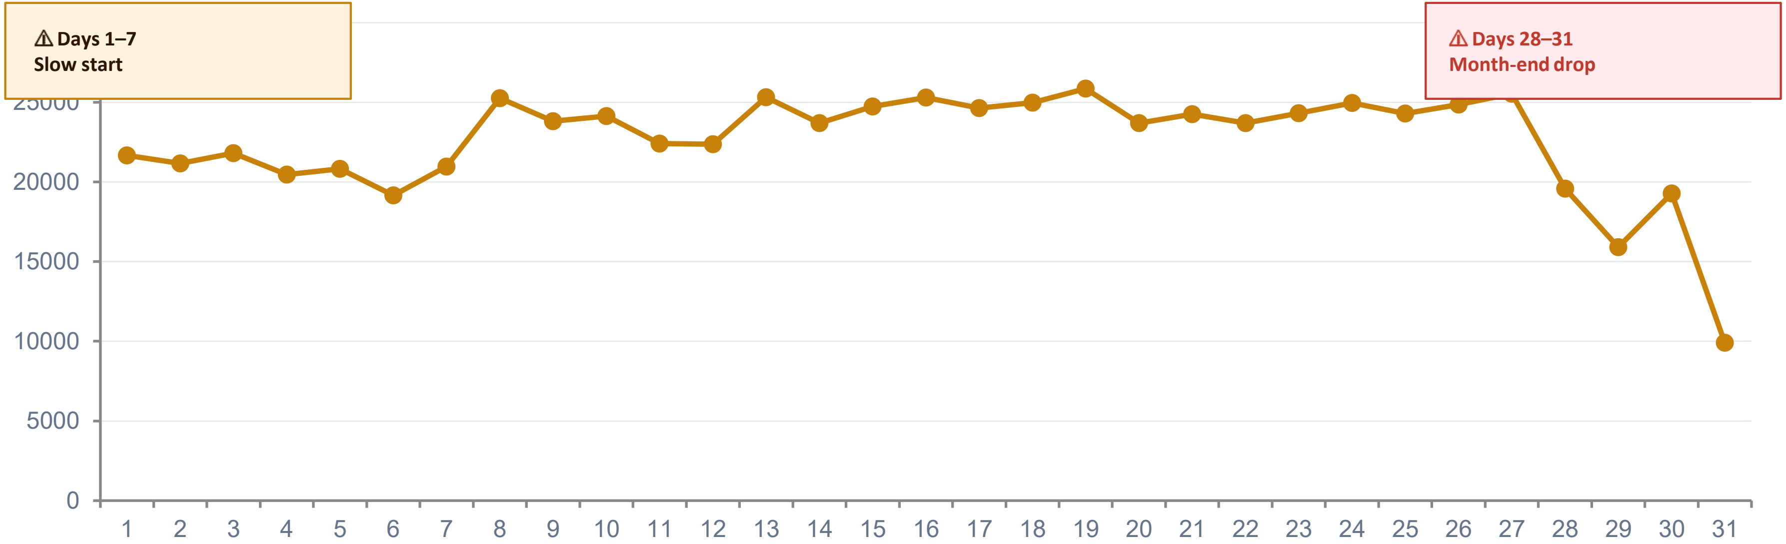


📈 **+102% Revenue Growth**
Jan → Jun across all stores

📌 **Observation:** Revenue has more than doubled across all three stores from January (≈R27,000 each) to June (≈R55,000 each). This consistent parallel growth confirms positive business momentum. However, the dip in February requires attention — it may indicate seasonal weakness or a post-January slowdown that future planning should buffer against.

Daily Sales Pattern Throughout the Month

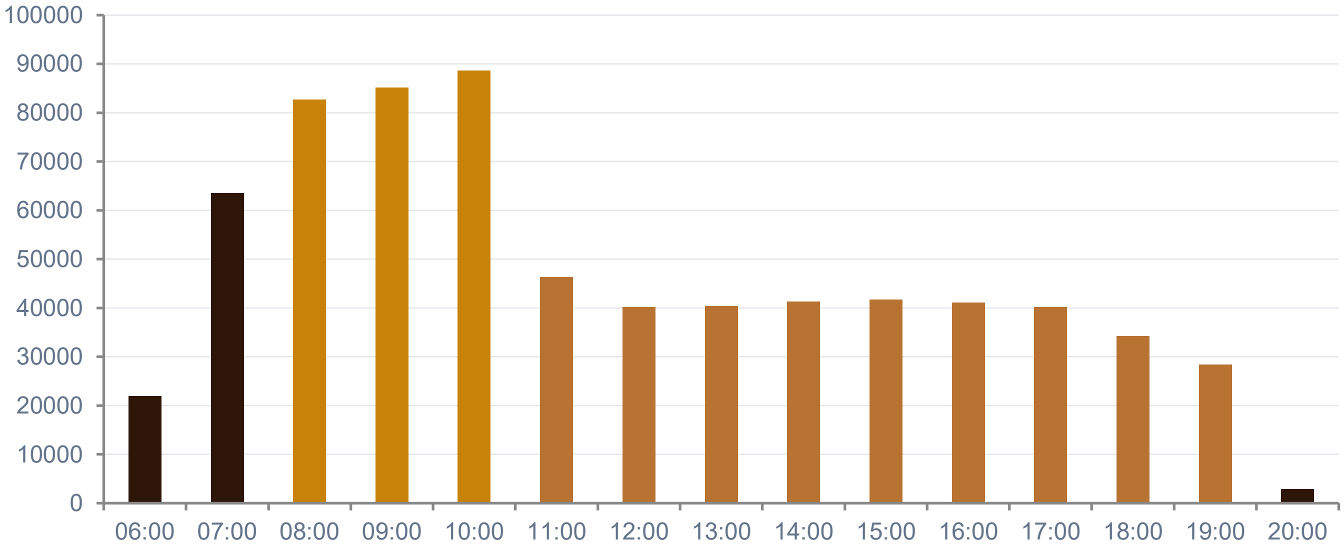
How total daily revenue (all stores combined) fluctuates across the 31 days of a calendar month



📌 **Observation:** Sales follow a clear and repeatable monthly rhythm: days 1–7 are below-average, trade peaks consistently between days 8–27, then falls sharply in the final days (day 31 crashes to R9,906 — less than half the mid-month average). Promotions and incentives timed at month-start and month-end could smooth this pattern and lift overall monthly revenue.

Revenue by Hour of Day — Peak Trading Hours

Total revenue accumulated per hour across all stores and the full six-month period



🔥 **Peak Hour**

10:00–11:00

R88,673 revenue

⚡ **Morning Rush**

08:00–10:00

R255,542 total

🌅 **Slowest Hour**

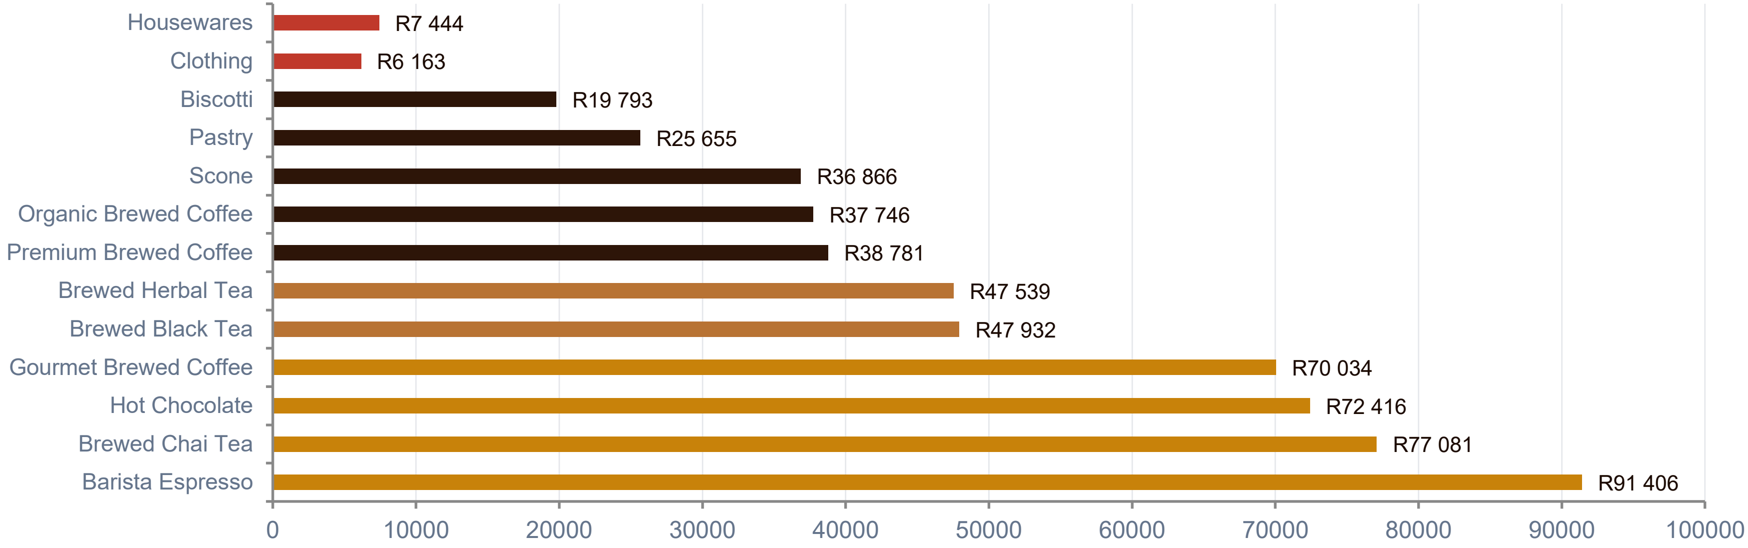
20:00

Only R2,935 revenue

📌 **Observation:** The 08:00–10:00 morning rush generates the highest revenue, peaking at R88,673 in the 10:00 slot. Revenue drops significantly after 11:00 and collapses to R2,935 by 20:00. Ensuring adequate staffing, fresh stock and fast service during the 08:00–10:00 window is critical. Consider extending breakfast promotions into the typically weaker 11:00–12:00 lull.

Revenue by Product Category

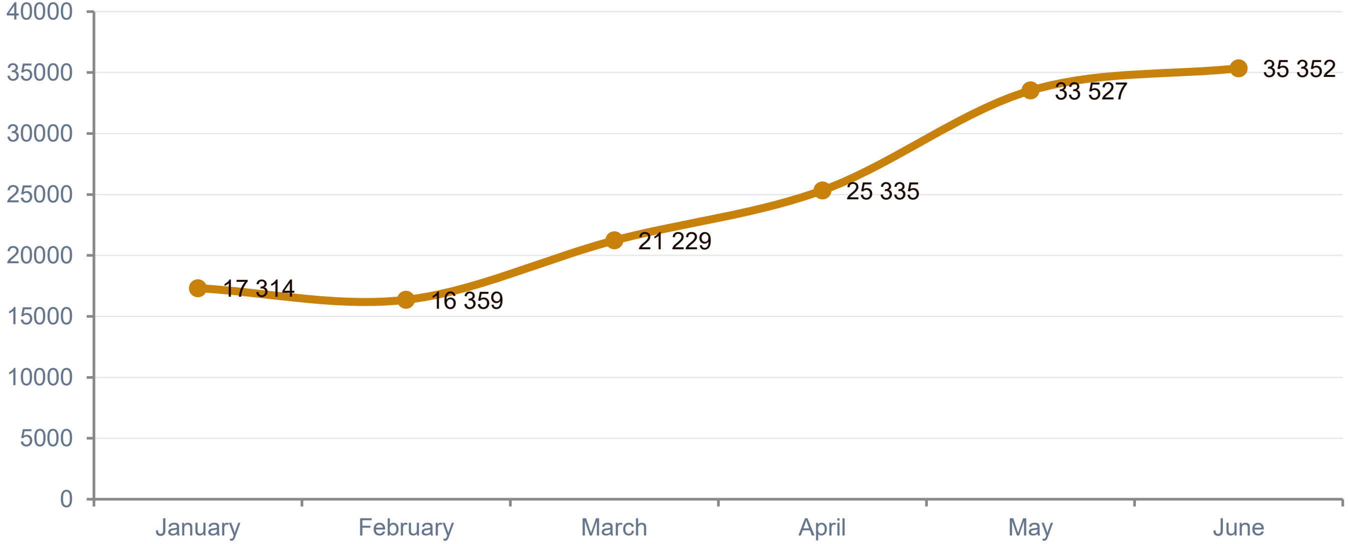
Total six-month revenue generated per product type — all three stores combined



📌 **Observation:** Beverage products dominate revenue: Barista Espresso (R91,406), Brewed Chai Tea (R77,082) and Hot Chocolate (R72,416) are the top three earners. Non-core merchandise — Clothing (R6,163) and Housewares (R7,444) — generates negligible revenue and likely ties up capital and shelf space that could be better utilised for high-margin beverage add-ons.

Monthly Transaction Volume — All Stores Combined

Total number of customer transactions per month (January to June) showing rapid growth



January

17,314

June

35,352

Growth

+104%

📌 **Observation:** Transaction volumes grew by 104% from January (17,314) to June (35,352) — an exceptional trajectory. February shows a minor dip which mirrors the revenue trend. The rapid growth from March onwards suggests improving market traction. Sustaining this growth requires consistent product quality, speed of service, and an active loyalty/rewards programme.

What the Data Tells Us

📅 Weekend Revenue Gap Is the Biggest Risk

Weekends generate only R195,224 (28%) vs R503,587 (72%) on weekdays. With stores open 7 days, this represents significant under-utilised trading capacity.

📊 All Three Stores Are Equally Matched

Revenue variance between stores is less than 3% (R230K–R236K). The problem is not location-specific — it is systemic across the business.

📈 Strong Growth Momentum Is Already in Place

Revenue doubled (+102%) and transactions grew +104% from January to June. The business is on an upward trajectory — the challenge is to accelerate and sustain it.

⏰ Morning Rush Is the Golden Window

08:00–10:00 generates R255,542 in revenue. After 11:00, hourly revenue drops sharply and collapses at 20:00 (R2,935). Staffing and marketing must protect and grow this window.

☕ Beverages Drive Everything — Other Categories Are Noise

Coffee, tea and hot chocolate account for over 90% of revenue. Clothing (R6,163) and Housewares (R7,444) are negligible and dilute the brand focus.

📆 Month-End Sales Collapse Is Predictable and Fixable

Days 28–31 show a sharp revenue drop (day 31: R9,906 — half the mid-month average). Early-month promotions and loyalty incentives could flatten this pattern.

Recommended Actions to Drive Revenue Growth

Data-informed strategies to address the identified challenges and accelerate growth

01 Launch Weekend-Specific Promotions
HIGH

Introduce Buy-One-Get-One offers on Saturdays, couple/family bundle deals on Sundays, and loyalty double-point weekends to drive weekend footfall and close the 61% revenue gap.

02 Introduce a Customer Loyalty Programme
HIGH

Reward frequent customers with points per purchase redeemable for free beverages. Loyalty programmes directly increase visit frequency, average spend, and weekend traffic.

03 Optimise Staffing for Peak Hours
HIGH

Ensure maximum staff deployment between 07:00–10:00 to capitalise on the morning rush. Slow hours (18:00+) can operate with lean staffing to manage labour costs.

04 Month-Start & Month-End Activation Campaigns
MED

Deploy targeted promotions during days 1–7 and 28–31 to offset the proven revenue dip during these periods. Consider digital vouchers or SMS campaigns for returning customers.

05 Phase Out Non-Core Merchandise
MED

Clothing and Housewares each contribute less than R7,500 over 6 months. Redirect that shelf space and working capital to high-margin beverage add-ons (syrups, premium blends, accessories).

06 Aggressive Marketing & Outdoor Advertising
MED

Deploy in-store promoters, distribute flyers and tasters at high-traffic intersections, install point-of-sale material in all available spaces, and where budget allows, place highway billboard advertising.

CONCLUSION

The Foundation Is Strong — The Opportunity Is Clear

1. All three Bright Coffee Shop stores generated a combined R698,812 in six months, with transaction volumes growing by 104% — clear evidence of a business in growth.

2. The analysis reveals that the primary revenue challenge is not declining store performance but a structural weakness in weekend trading, month-end cash flow timing, and an under-optimised product mix.

3. By addressing the weekend revenue gap through targeted promotions, introducing a loyalty programme, and refocusing the product range on high-margin beverages, the business has the potential to significantly outperform current revenue levels.

4. With the data now clearly mapped, the new CEO has a precise roadmap to implement changes, track results, and build on the strong momentum that is already visible in the data.
